

# Project log

Barnabas Ujvari s1758100  
(in group with Anubhav Chakravarty )

Nov 14 17:00-22:00 hours

- Plans:
  - Get a good understanding of what we should do, to estimate the workload, and maybe do some first steps.
- Achievements:
  - First impressions, reading through
  - Started reading the pdf
    - 14 pages of instructions took a lot of time to understand well
    - We read through the whole thing multiple times as we got some problems last time we skipped some part
  - downloaded the zip files to open in eclipse
  - Reading the code, but mainly just understanding what to do later
    - We definitely had to invest quite some time into the Logger part to get what is expected of us
  - Updated Log
- Reflections:
  - We generally did what we planned
  - Well estimated the time needed to grasp the exercise

Nov 23 17:00-20:00:

- Plans: Pair programming as much as we can
- Achievements:
  - Did pair programming on:
    - Buyer, Seller, Lot classes
    - Register buyer/seller, addLot, viewCatalogue methods
  - I was doing the coding and Anubhav did the thinking about testing and improvements
  - Updated Log
- Reflection:
  - Peer programming definitely helped in eliminating errors in writing time

Nov 24: 9:00-12:00 (lunch break) 13:00-16:00:

- Plans: Separate jobs at home, Programming for me
- Achievements:
  - I finished the program as I wanted to and close auction took the most time as expected
  - Updated Log
- Reflection:
  - Programming part this time seemed more like a practice than a challenge, which is very useful, as when I got stuck it was something I had to revise, not learn as new material

Nov 25 12:00-16:00:

- Plans: Polishing other parts and writing implementation together
- Achievements:
  - Understanding task
  - We wrote about decisions we made about data structures and class setups, and why we left out things we included in our last diagram that could have been OK
  - Updated Log
- Reflection:
  - Took some time to decide what we should be including in this part but once decided, it was a well organised process, with good results

Nov 29: 9:00-16:00

- Plans: Review our work
- Achievements:
  - Reviewing the code together
    - Corrected MakeBid's interest check and viewCatalog's ordering
  - Review UML, HighLVL
  - Review project logs, if everything is included
  - Thinking Through the code again
  - Updated Log
  - Submission done
- Reflection:
  - We are happy with the overall product, we will be waiting for the feedback
